**Feet, footwear  
and falls**

The importance of well-fitting suitable footwear is very important in the management of falls.

Well-fitting footwear will also lead to greater comfort, prevention and management of certain foot ailments.

## Footwear and falls

- Good footwear has a large part to play in the prevention of falls.
- It is important to have supportive shoes and slippers.
- Painful feet or altered sensation affects balance and stability which may also contribute to falls.

## What to look for in a good shoe

- Laces, straps or buckles are preferable for stability.
- Heel height should be under 2.5cm for stability.
- Good non-slip sole.
- Shoes should offer firm support under the arch.
- **AVOID jandals and shoes without backs. Shoes must have a back on them to support the heel.**

## What to look for in a good slipper

- Although slippers have a purpose, they should not be worn as a standard shoe.
- Buy slippers with velcro adjustable straps as these are more stable and allow for swelling of feet (see picture below).
- Slippers must be fitting not sloppy.
- Good non-slip sole.
- **AVOID scuffs. Slippers must have a back in them to support the heel.**

## Advice / aids for putting on shoes

- Sit down to put on and take off shoes.
- Use elastic shoe laces.
- Use a long handle shoe horn.

## Further advice or assistance

- Aim to buy shoes in the afternoon as feet swell during the day.
- Always try both shoes on and walk around in the shop.
- Wear socks to reduce the risk of pressure areas as socks absorb perspiration.
- Your podiatrist / occupational therapist / physiotherapist can help you further and give advice on footwear and aids to assist you.
